

Robotics Business Review Names Top 50 Companies to Watch in 2017 Universal Logic Elected to RBR50

Nashville, TN, 3/21/17 – [Robotics Business Review](#) (RBR) has unveiled its sixth annual [RBR50 list](#), naming Universal Logic as one of the most noteworthy companies in the global robotics industry for 2017.

The global robotics industry is more competitive than ever, and new companies are emerging constantly. The RBR50 list outlines the companies that you should keep on your business radar. RBR50 members are the visionaries, trend setters, and companies to watch.

RBR50 companies are recognized based on their groundbreaking applications, market influence, and industry potential. The list represents many different levels and facets of the robotics ecosystem.

“For this year’s list, our team had the daunting task of evaluating numerous competitive nominations. The RBR50 for 2017 represents the cream of the crop of the world’s most innovative, most influential, and most commercially successful robotics companies,” said Eugene Demaitre, RBR senior editor.

David Peters, CEO of Universal Logic, explains its success, “Universal started as a NASA spin-off in 2008. Since then, we have been integrating artificial intelligence with vision, grasping and motion control. Our years of experience lead to the development of a pre-engineered complete robotic workcell that provides the strength and speed of industrial robots with the ease of integration of collaborative robots. Called the [Neocortex® Goods to Robot Cell](#), it integrates in a day and costs a fraction of traditional integrated solutions. Neocortex gives the robot human-like flexibility to handle order fulfillment, bin picking, part induction and assembly. We appreciate RBR’s recognition of our paradigm-shifting products.”

This international compilation spans 10 countries and includes companies ranging from brand-new startups to the biggest robotics makers. The RBR50 list is dynamic, with

robotics companies entering and leaving on an annual basis and thus creating a list that is indicative of where the global automation as a whole is headed.

“We expect the RBR50 honorees to continue to lead the industry across growing markets, and we look forward to tracking their progress in 2017,” added Demaitre.

New this year, RBR will also release a series of 5 separate lists naming the top 10 companies in the following categories: Industrial/Manufacturing, Supply Chain/Logistics, Infrastructure, Healthcare, and Components Providers.

RBR will release these lists every other month over the course of the year. While some RBR50 winners are sure to make it on to these new lists, expect to also see some lesser-known companies that are greatly impacting their markets.

About Robotics Business Review

Robotics Business Review provides business intelligence for the global robotics industry. Members enjoy exclusive insights into global news, tracking of financial transactions, analysis of new technologies and companies, annual and quarterly research reports, access to the RBR50 Top 50 Companies list and much more. About Universal Logic

Universal provides supply chains with complete automated material handling systems for high-mix/high-volume applications. Systems integrate artificial intelligence with vision, grasping, and motion control giving machines human-like flexibility at high speed. Neocortex artificial intelligence technology was invented for NASA twelve years ago and developed for industrial use by Universal starting in 2008.
